## TRANSPARENT MICRO DEPOSIT TECHNOLOGY

For the first time in India We brings you an innovative ink and glaze technology for ceramic products. The Transparent Micro Deposit Technology is an advanced method involving gelling procedures at a micro-level. The technology creates a gelling effect around the ink molecules of the tiles and protects them against the high temperature of Kiln, keeping the intensity of the ink intact for 100% color pigmentation in the final product.

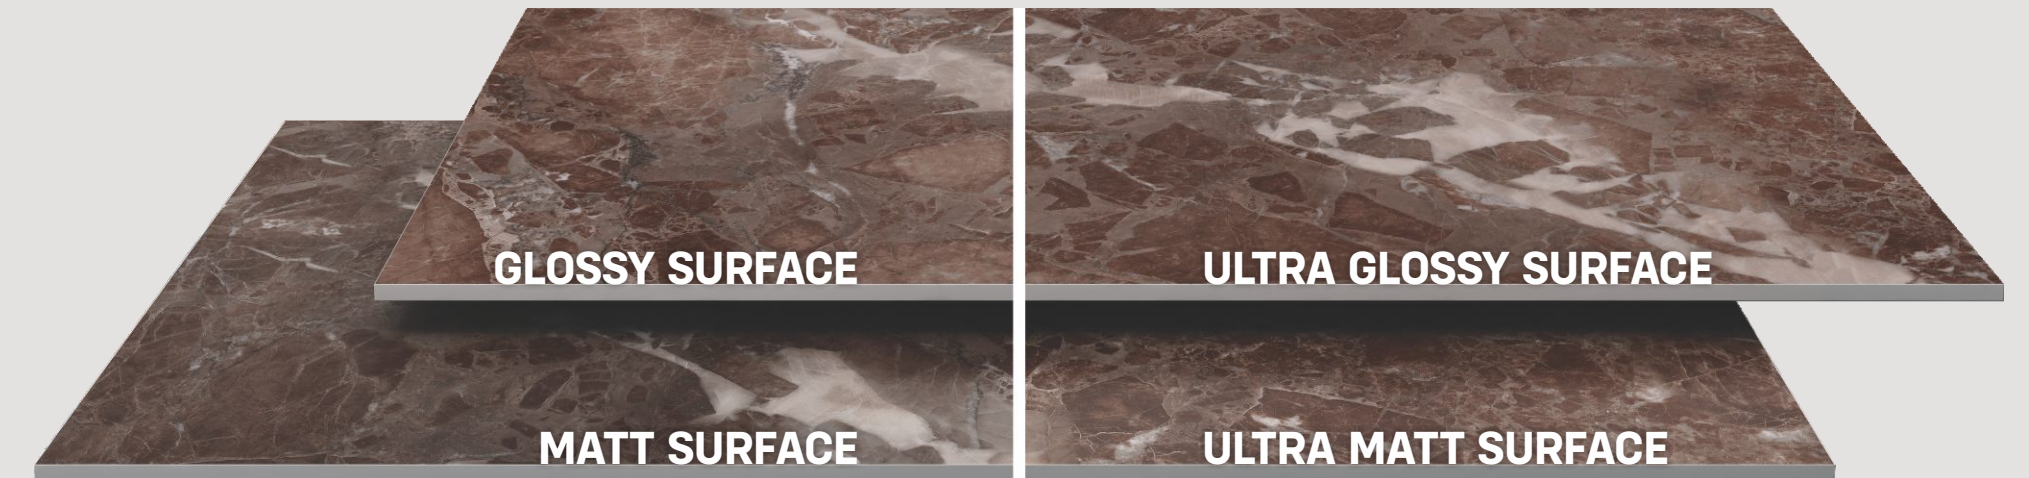

The procedure enhances the properties of the surfaces with an indistinct coating that doesn't accord with any physical change resulting in no color difference between high gloss and matt finish and equips surfaces with a plethora of features. The deposit transforms surfaces into heat-proof, hydrophobic, oleophobic, scratch-proof, anti-contaminating, and a lot more.
